

In Guyan, with more than 20 years of experience in providing comprehensive communications solutions, we are always working to provide customers with a wide range of telecommunication hardware and software applications. Guyan Company, with a focus on open and hidden market needs, has provided a suite of integrated software and hardware solutions that meet the needs and problems of Iranian and international organizations through creative solutions. We help our customers keep the heart of organizational communication at the core of their business processes.

We take steps to conceptualize, design hardware and software, and build prototype in close contact with customers. In this way, the final product has the maximum overlap with the customer's requirements. Up to date management practices, the recruitment of occupational experts and the rapid flow of information have made Guyan an innovative company. The use of this infrastructure and the sincere and close relationship with customers make it possible to identify opportunities and discover the future needs of organizations. We, along with organizations, highlight solutions and provide them with the most innovative and competitive pricing.

Our colleagues are at all stages of selling, producing, implementing and after-sale with you. These steps begin by providing professional consulting services. At the same time, our experts will provide you with the technical design of the solution. Once finalized, the next step is to examine the current infrastructure of your network. We will provide you professional network optimization services as needed. Then it's time to customize the solution to the needs and requirements of the project. We are at your disposal at all stages of implementation. Also, in many projects, all stages of implementation are the responsibility of Guyan and the project is delivered as Turnkey. In the next step, hardware and software usage will be taught to the organization's experts as a practical workshop. After graduation, the credentials will be awarded to the experts.

Professional and efficient after-sales service is the distinction point of Guyan. At all stages of the after-sales, our experienced and professional experts are your helpers. Along with this expert team, a network of representatives from all over the country will provide support services locally. Guyan Technical Support Call Center is always ready to answer questions from users and system administrators. The center identifies and addresses the needs of its users at three levels: basic, technical, and engineering. The referrals of different layers are tracked to the requestor in the shortest time possible and by emailing them the way to advance each item.
